EMPLOYMENT

Principal Product Manager, Cloud Foundry – Nov 2015– Present
Pivotal Software Inc., *Denver CO*

Product Manager in the Cloud Foundry organization creating value for customers through agile practices working with high performing R&D teams to define, validate, communicate and deliver product vision.

- Create and Communicate a vision for several products in the Pivotal Cloud Foundry suite including Application Autoscaler, Task Scheduler and Application Metrics.
- Increased adoption and retention of App Autoscaler release over release.
- Developed a product vision and roadmap to deliver value inline with the overall corporate vision.
- Facilitate workshops for ideation, design and implementation planning for product areas as well as for related teams such as product security and product support.
- Manage DevOps, release cadence and launch for products on Pivotal Web Services the SASS/cloud offering of Cloud Foundry.
- Work with Sales, Marketing, Product Operations groups and customers to ensure outcomes (value delivery) of all products and related projects.

Director, Product Engineering – Nov 2012– Oct. 2015
Denovo Ventures LLC, Niwot, CO

Director of Product Engineering organization responsible for vision, strategy and creation of new products and services. Responsible for overall profitability of all software development efforts including Professional Services and Managed Services lines of business.

- Create a new paradigm for Cloud delivery of traditional ERP using application containers, data containers, IaaS and process automation as well as accompanying SOW and Implementation Plan.
- Create and operate profitable, repeatable and quality controlled processes, procedures and methodologies for all product development activities including software development, systems architecture, delivery and support planning.
- Architect and manage teams to deliver various projects and products such as: Denovo Cloud Broker, Denovo QuickStart, Denovo QuickPass, OnDemand Advanced Monitoring System and others.
- Work with Executive-level Sales, Marketing, Delivery and Operations groups to ensure corporate level success of all products and related projects.
- Grew and managed $12 million in revenue driven by a team of 57 that included developers, quality assurance and business analysts using geographically dispersed teams and an offshore practice.
- Developed and implemented planning, staffing, delivery and support processes for full SDLC projects. Managed training programs to improve developer's skills and provide first class training to clients.
- Enabled high quality output with development practices, tools and frameworks such as: Agile, JIRA, Jenkins, git, and more.

Principal Member of Technical Staff – Apr 2005– Jan 2012
BEA Systems / Oracle, Boulder, CO

Lead Engineer on the Weblogic Workshop and Common Tooling products. Responsible for bug fixes, enhancement requests, patch and maintenance pack delivery. Worked on both runtime (server side and web UI) and tooling implementations based on Apache Struts, Apache Beehive, Eclipse, WebLogic Server.

Architect/ Senior Developer – Jun 2004 – Apr 2005
Aon Corp., Warranty Group, Chicago, IL

Architect and lead developer of insurance product delivery systems. Designed and maintained highly available B-to-B and B-to-C product configuration and delivery web sites. Initiated major improvement in standards and processes used to design, develop, deploy and maintain enterprise level software.

Lead Consultant – Mar 2004– Jun 2004
Trust Mark Insurance, Lake Forrest, IL

Primary Consultant responsible for development of insurance claim processing system. Researched and implemented the integration of the Kodak imaging system with a claims processing system to streamline policy fulfillment.
